

# LIBERO MULTIVIEWER

## LIBERO MULTIVIEWER & MONITORING

Libero Multiviewer is designed to take multiple video/audio signals and combine them to monitor in real-time. The system provides attractive and flexible layouts for one or several large screens. It allows to preview the selected video source on the configuration window. This feature helps you to see the source and corresponding video signal. The layouts are customizable according to your scenarios and shows. Static and dynamic elements are available on Layout Designer such as video source or clocks. It analyzes each input signal for important parameters to create notifications or warnings and sends them via e-mail.

- » Stable for 24/7 operations
- » Customizable layouts
- » User friendly interface and layout designer
- » SDI, NDI or IP Stream inputs
- » SDI, NDI or IP Stream outputs
- » Multi-display support
- » SD/HD/UHD/4K for SDI input up to 60 fps\*
