

AVGScan

Signiant Components

Version 1.0

What it is

This product is a functional extension to the standard Signiant Workflow Engine. This Agent component integrates seamlessly into the engine. It allows to run virus scans with the AVGScan software.

What to use it for

This product integrates the AVG virus scan software into the Signiant Workflow Engine, allowing Signiant workflows to make sure only files without viruses are processed and moved to connected systems such as PAMS, MAMs, CMSs, NewsRooms or Archives.

How it works

The 'AVGScan' component takes a list of files and makes use of the AVG antivirus engine to scan each file. Various filters can be applied to exclude certain files or include only specific files.

Specifications

The 'AVGScan' component takes, among others, the following parameters:

- A list of files to scan
- Include and Exclude patterns
- Quarantine directory

It returns

- A return code
- A return message
- A list of passed files
- A list of failed files
